$\mathbf{A}_{\text{sym}} = \frac{B_0}{2}(-y,\ x,\ 0)$**: swirls**
uniform along C: $A_t = B_0 r/2$

$\mathbf{A}_{\text{alt}} = B_0(0,\ x,\ 0)$**: all along** y
large at left/right, zero at top/bottom

light ⊙: the same uniform $\mathbf{B} = B_0 \mathbf{e}_z$; purple arrows: $\mathbf{A}$; width of C $\propto$ tangential component of $\mathbf{A}$
