(a) one curve, two slopes
operating point
tangent: $\mu_r = 113$
secant: $\mu_r = 768$
$B$ (T)
$H$ (A/m)
(b) they part with bias
relative permeability $\mu_r$
secant
differential
vacuum $\mu_r = 1$
$H$ (A/m)
(c) the increment is anisotropic
$|\mathbf{B}| = B_0$
bias $\mathbf{B}_0$
across: $\mu_{\text{sec}}\,\delta H$
along: $\mu_{\text{diff}}\,\delta H$
dotted circle: isotropic linear
