Project
Chapters
Checks that must pass
one model contract · growing scope
Reproducible interface
units, frame, normalization travel with arrays
23 24
others can reproduce and question it
5
P5: check the regime, then add RF
switch to the full-wave operator if needed
8 22
three rulers; ports; power balance
4
P4: one field, PNS and heating
two different read-out functionals
11 18 21 22
refine 4 steps apart; criterion; averages
3
P3: bias first, then small signal
consistent tangent on magnet and yoke
13 14 15 17
bias converged first; plateau = tangent
2
P2: one source basis, many read-outs
field, loss, voltage, force, tissue E
12 18 19 20
units of every read-out; re-solve the wires
1
P1: TES and TMS on one mesh
same K, different right-hand sides
4 10 11 16
linearity, conservation; check the source alone
0
Start: two-element bar
assembly, reactions, power three ways
16
same power by all three routes
