
Electrostatic: starts and ends on charges
$\oint \mathbf{E} \cdot d\boldsymbol{\ell} = 0$
+
−
purple dashes: equipotentials (exist everywhere)
Induced: closes around the changing flux
$\oint \mathbf{E} \cdot d\boldsymbol{\ell} = -\dot{\Phi}_B \neq 0$
$\partial_t \mathbf{B}$
$\phi = 0$
no single-valued equipotentials exist
