$\psi_s = \psi_0(1-x^2)(1-y^2)$，$\mathbf{K}_s = \nabla_s \psi_s \times \mathbf{e}_z$

取等步长的等值线作导线

边界上 $\psi_s = 0$：没有电流流出板边

每条导线承载 $\Delta\psi = \psi_0/N$（$N = 5$）
